CHAPTER 1

GENERAL

1.1 INTRODUCTION. The conversion of the Integrated Facilities System from local automated or manual systems consists of a baseline generation period and an operational cutover period. During the baseline generation period, those master files necessary for cutover to live operations will be generated. To accomplish the creation of required master files, and selected portions of the IFS operational system that pertain to editing, file building, file maintenance, and file visibility will be executed. All of the cycles required for baseline generation are contained in USACSC Manual 18-1-B-AKA, Vol III (Operations and Scheduling), with the exception of two One Time cycles which are included in this document.

1.2 PURPOSE. The purpose of this document is to provide instructions on how to use the Operations and Scheduling Manual for baseline generation. Included are narrative descriptions of each cycle, instructions on how to structure each cycle, purpose, and suggested sequence of cycles.

1.3 ONE TIME CYCLES. Two One Time cycles are included in this document because they have no relationship to the Operations and Scheduling Manual.

1.4 FILE DESCRIPTIONS. File descriptions, file specifications, and record layouts for all master files created in this procedure are contained in IFS-I Extension, Vol I (IFS-I Conversion Baseline Document).

1.5 These procedures are applicable for DOS-E and OS operating environments.

CHAPTER 2

CYCLE AKAC1, RPI/BIS CONVERSION (ONE TIME)

2.1 PURPOSE. This is a One Time cycle to convert an existing data base, the Real Property Inventory/Building Information Schedule (RPI/BIS) maintained at OCE Headquarters, Washington, D.C., into a skeleton data base for the assets module of IFS. This cycle is run at the DPI of the ASD and is included in this document so that the skeleton data base can be recreated at the DPI of the receiving installation in the event that some of the tapes are unreadable.

2.2 DESCRIPTION. This cycle converts the RPI/BIS file extracts for the receiving installation into a skeleton assets data base consisting of the AØ9AKA (IM&P), A14AKA (F&MP), and A18AKA (R&D$) files. Additional products of this procedure are various assets related reports for the Facility Engineer to use as work documents in the preparation of transactions for completion of the assets data base.

2.3 OPERATING INFORMATION.

2.3.1 CONTROL CARDS. Refer to Attachment 1 for control card requirements.

2.3.2 INPUTS. RPI/BIS file received from OCE Field Office, Ft. Lee, VA.

2.3.3 JOB CONTROL. Refer to Attachment 2, Pages A2-1, A2-2, and A2-3 for JCL Deck Setup.

2.3.4 OUTPUTS. Refer to Attachment 3, Pages A3-1 and A3-2 for cycle outputs.

2.3.5 OPERATOR INSTRUCTIONS. Refer to Attachment 4, Cycle AKAC1 for cycle setup and execution.

CHAPTER 3

CYCLE AKAC2, FILE INITIALIZATION (ONE TIME)

3.1 PURPOSE. IFS requires "dummy" files as initial inputs for the first execution of the file build procedures. This cycle will create the required dummy files. This is the first step of installation processing.

3.2 DESCRIPTION. The dummy files created in this cycle are created by a utility program. The files output from this cycle will contain only a standard header and trailer record with exception of the A29AKB, A35AKB, and A55AKB files which contain one or more dummy records.

3.3 OPERATING INFORMATION.

3.3.1 CONTROL CARDS. None.

3.3.2 INPUTS. None.

3.3.3 JOB CONTROL. Refer to Attachment 2, Pages A2-4, A2-5, and A2-6 for JCL Deck Setup.

3.3.4 OUTPUTS. Refer to Attachment 3, Pages A3-3, A3-4, and A3-5 for cycle outputs.

3.3.5 OPERATOR INSTRUCTIONS. Refer to Attachment 4, Cycle AKAC2 for cycle setup and execution.

CHAPTER 4

ABBREVIATED DAILY CYCLE (AKA1Ø)

(FEMS FILE BUILD)

4.1 PURPOSE. For the purposes of IFS Baseline Generation, abbreviated versions of the IFS Daily Cycle (AKA1Ø) will be executed to produce the major portions of the Facilities Engineers Management System (FEMS) Module Master Files.

4.2 DESCRIPTION. The abbreviated daily cycles will accept file maintenance transactions furnished by the Facility Engineer (FE) and will create/update FEMS Master Files in preparation for live operations. The only output reports will be Audit Trails, updated Uniques Listing, and Error Reports. During the baseline generation period, two different versions of the Daily Cycle will be executed.

4.3 ABBREVIATED DAILY CYCLE, VERSION I. Before any subsequent cycles can be run, the Uniques File (AØ5AKB) must be created because all subsequent processing depends upon the availability of applicable tables from the Uniques File, therefore this file must be created first. This will be accomplished by running job steps AKADA1 and AKADA2 of Cycle AKA1Ø.

4.4 ABBREVIATED DAILY CYCLE, VERSION II. After the Uniques File has been established, any of the cycles contained in this manual can be executed, including Version II of the abbreviated daily cycle. This version of the daily cycle will post updates to the Uniques File created in paragraph 4.3 and will create/update the Labor and Equipment Master File (A29AKB) and the FEMS Job Order Master (A35AKB). Version II of the abbreviated daily cycle will consist of Cycle AKA1Ø, Job Steps AKADA1, AKADA2, AKADA3, AKADA4, and AKADA5.

4.5 OPERATING PROCEDURES. All of the procedures and operating information required to run the abbreviated versions of the daily cycle are contained in USACSC Manual 18-1-B-AKA, Vol III (Operations and Scheduling). Refer to appropriate chapters and attachments pertaining to Cycle AKA1Ø and Job Steps as referenced in paragraphs 4.3 and 4.4 above.

CHAPTER 5

ABBREVIATED AS REQUIRED CYCLE (AKA7Ø)

(ASSETS UPDATE AND REPORT GENERATOR)

5.1 PURPOSE. During the baseline generation period, abbreviated versions of As Required Cycle (AKA7Ø) will be executed to update the IFS Assets Module Master Files. This cycle can be run at any time after the Uniques File (AØ5AKB) has been created.

5.2 DESCRIPTION. The abbreviated As Required Cycle will accept assets update transactions furnished by the FE and will update the assets data base. In conjunction with an update assets data base, various reports will be produced for the FE to evaluate the progress of baseline generation efforts and to resubmit those transactions rejected by edits. During the baseline generation period, two different versions of the As Required cycle may be executed.

5.3 ABBREVIATED AS REQUIRED CYCLE, VERSION I. This version of Cycle AKA7Ø provides the FE with the capability to update his assets data, without generating the voluminous reports produced by running the entire cycle. This provides a capability to perform several quick updates and resubmit erroneous transactions before printing the entire spectrum of reports which is costly in terms of computer time and paper. To run this version of the As Required cycle, run Cycle AKA7Ø, Job Steps AKARA1S1, AKARA2S1, AKARA3S1, and AKARA4S1.

5.4 ABBREVIATED AS REQUIRED CYCLE, VERSION II. This version of the As Required cycle will also update the assets data base and in addition will provide additional reports for the FE to evaluate the progress of baseline generation efforts. This can be accomplished by running Cycle AKA7Ø, Job Steps AKARA1S1, AKARA2S1, AKARA3S1, AKARA4S1, and AKARA5S1.

5.5 OPERATING PROCEDURES. All of the procedures and operating information required to run the abbreviated versions of the As Required cycles are contained in USACSC Manual 18-1-B-AKA, Vol III (Operations and Scheduling). Refer to appropriate chapters and attachments pertaining to Cycle AKA7Ø and Job Steps as referenced in paragraphs 5.3 and 5.4 above. To obtain all of the reports available in Cycle AKA7Ø, the procedure outlined in Chapter 7, Assets Users Manual must be followed.

CHAPTER 6

ABBREVIATED WEEKLY CYCLE AND COMPLETE WEEKLY CYCLE (AKA2Ø)

(TASK CODE MASTER BUILD AND FEMS REPORT GENERATOR)

6.1 PURPOSE. The abbreviated Weekly Cycle will be used to create/update the Task Code Master File (A55AKB). The full Weekly Cycle will provide the FE visibility of the contents of the FEMS Job Order File (A35AKB) as well as updating the A55AKB file. The Task Code Master can be created at anytime, and is used during baseline generation only to run the complete cycle. The complete Weekly Cycle should not be executed until the FE begins to post work documents to the A35AKB file.

6.2 DESCRIPTION. The abbreviated Weekly Cycle accepts file maintenance transactions (FWl only) and creates/updates the Task Code Master File (A55AKB). The only printed output is the Task Code Error List.

6.3 ABBREVIATED WEEKLY CYCLE. To build the Task Code Master File, run Cycle AKA2Ø, Job Steps AKAWAl and AKAWA2.

6.4 FULL WEEKLY CYCLE. Visibility of the FEMS Job Order File is not provided in the Daily Cycle, and the only way the FE can review the status of this file is by running the full Weekly Cycle. Task Code Master updates can also be updated at this time. To accomplish this, run Cycle AKA2Ø in its entirety.

6.5 OPERATING PROCEDURE. All of the procedures and operating information required to run the abbreviated and full Weekly Cycles are contained in USACSC Manual 18-1-B-AKA, Vol III (Operations and Scheduling). Refer to appropriate chapters and attachments pertaining to Cycle AKA2Ø and Job Steps as referenced in paragraph 6.3 above.

CHAPTER 7

AS REQUIRED (CYCLE AKA78)

(FACILITIES INSPECTIONS)

7.1 PURPOSE. All of the facility component codes as well as the overall facility condition codes on the skeleton assets data base are reflected as condition code "CO" (Not inspected). Examples of components are: floors, ceilings, interior paint, etc. In order to complete the assets data base and to gain the full benefits of IFS processing, all components must be inspected and the results posted to the assets data base. The overall facility condition is then computed according to the condition of the individual components. This cycle provides the FE the capability to post inspection results during the baseline generation period. This cycle can be scheduled at anytime. It is recommended that all facilities be posted to the assets data base before executing this cycle.

7.2 DESCRIPTION. This cycle accepts inspection results and posts them to AØ9AKA (IM&P) and A14AKA (FM&P) files of the assets module. All components in less than serviceable condition are written out to the component deficiency file (A12AKC). Scheduled inspections of facilities can also be entered in this cycle.

7.3 OPERATING PROCEDURES. All of the procedures and information required to run Cycle AKA78 are contained in USACSC Manual 18-1-B-AKA, Vol III (Operations and Scheduling). Refer to the appropriate chapters and attachments pertaining to Cycle AKA78.

CHAPTER 8

ONE TIME CYCLE (AKA98)

(RPMA DUMMY FILE BUILD)

8.1 PURPOSE. This cycle creates dummy files used to initialize files for use in As Required Cycles AKA73 and AKA78. This cycle need not be run until the FE builds the Equipment Master (AQGAKA) and the Functional Group Master (AQPAKA) files required for expanded Real Property Maintenance Activities (RPMA).

8.2 DESCRIPTION. A utility program is used to initialize files with a standard header and trailer records.

8.3 OPERATING PROCEDURES. All of the procedures and operating information required to run One Time Cycle AKA98 are contained in USACSC Manual 18-1-B-AKA, Vol III (Operations and Scheduling). Refer to appropriate chapters and attachments pertaining to Cycle AKA78.

CHAPTER 9

AS REQUIRED CYCLE (AKA73)

(EQUIPMENT MASTER BUILD)

9.1 PURPOSE. This cycle provides the FE with the capability to create/update the Equipment Master File (AQGAKA) which will be required for extended RPMA module. This file can be created anytime and is not dependent on the existence of any other file.

9.2 DESCRIPTION. This cycle accepts equipment update transactions and creates/updates the AQGAKA file. The Installation Equipment List and the Equipment Error List are output in this cycle.

9.3 OPERATING PROCEDURES. All of the procedures and operating information required to run Cycle AKA73 are contained in USACSC Manual 18-1-B-AKA, Vol III (Operations and Scheduling). Refer to the appropriate chapters and attachments pertaining to Cycle AKA73.

CHAPTER 1Ø

AS REQUIRED CYCLE (AKA76)

(FUNCTIONAL GROUP MASTER BUILD)

1Ø.1 PURPOSE. This cycle provides the FE the capability to create/update the Functional Group Master File which will be required for the extended RPMA modules. This cycle can be run at any time after the Uniques File (AØ5AKB) has been created.

1Ø.2 DESCRIPTION. This cycle accepts Functional Group update transactions and combines them with selected tables from the Uniques File (AØ5AKB) and creates/updates the Functional Group Master File (AQPAKA). Error Report and a Functional Group Master List are output in this cycle.

1Ø.3 OPERATING PROCEDURES. All of the procedures and information required to run Cycle AKA76 are contained in USACSC Manual 18-1-B-AKA, Vol III (Operations and Scheduling). Refer to the appropriate chapters and attachments pertaining to Cycle AKA76.

CONTROL CARD PREPARATION INFORMATION

For use of this form, see CSCM 18-1, VOL I; the proponent agency is Qual Assur Dir (Tech Stds & Doc Div)

1. CYCLE/JOB ID:	2. CYCLE/JOB TITLE:	3. DATE
